(54) Title: ASSEMBLY COMPRISING A FILTER HOUSING AND AT LEAST ONE FILTER CARTRIDGE AS WELL AS A  
FILTER CARTRIDGE FOR SUCH AN ASSEMBLY

(57) Abstract: The invention relates to an assembly comprising a filter housing and at least one filter cartridge. The at least one filter cartridge is tubular, comprises a tube wall provided with filter means and comprises a central discharge channel with a discharge connection for discharge of filtered medium. The tube wall comprises filter means through which the medium to be filtered is able to flow transversely to the tube wall. The filter housing comprises a filter chamber, surrounded by a sidewall, in which the at least one filter cartridge is accommodated with the longitudinal direction parallel to the sidewall. The filter chamber has at least one outlet per filter cartridge to which the discharge connection of the respective filter cartridge is connected. The sidewall of the filter chamber is provided with at least one inlet for feeding in the medium to be filtered. The inlet opens into the filter chamber at a level that is traversed by the at least one filter cartridge. Viewed in the transverse direction of the filter cartridge and at the level of the inlet, the shortest distance from the filter cartridge to the side wall is greater than the shortest distance from the filter cartridge to the side wall viewed in the transverse direction of the filter cartridge and below or above the inlet. The invention furthermore relates to a filter cartridge intended for an assembly according to the invention.
